Part II Course Details

1. Abstract

(A 150-word description about the course)

This course approaches the study of English from the perspective of spoken language interactivity, which refers to the experience, linguistic features, discourse patterns, and dynamics of being, speaking and gesturing with others in different social and professional situations. We focus on the purposeful and meaningful situation of co-presence and how this relates with language as not only a system but a culturally-embedded activity.

Students will learn about theories, concepts, and techniques for discussing, analysing, and assessing spoken language interactivity in depth along with their different underlying theories of language and speaking. Students will explore diverse examples from a wide range of communicative and cultural contexts, including social, workplace, and classroom settings, as well as visual art screen-media content.

The course therefore challenges students to think about the conceptual and imaginative potential of their own spoken language interactivity for their future careers in educational, creative, or corporate sectors.

2. Course Intended Learning Outcomes (CILOs)

(CILOs state what the student is expected to be able to do at the end of the course according to a given standard of performance.)
